

现在我们来给博客添加用户头像,注册的用户根据注册时的邮箱获取 gravatar 头像,未注册的用户则根据留言填的邮箱获取 gravatar 头像什么是 gravatar ?详情请戳:http://www.gravatar.com

我们设定:在主页和用户页的文章标题右侧显示作者头像,在文章页面留言的人的头像显示在留言板左侧。

我们需要用到 Node.js 中的 crypto 模块,之前已经引入过,所以这里可以直接使用。

添加已注册用户的头像

打开 user.js, 在最上面添加一行代码

```
var crypto = require('crypto');

然后将 User.prototype.save 内的

var user = {
    name: this.name,
    password: this.password,
    email: this.email
};
```

修改为

```
var md5 = crypto.createHash('md5'),
    email_MD5 = md5.update(this.email.toLowerCase()).digest('hex'),
    head = "http://www.gravatar.com/avatar/" + email_MD5 + "?s=48";
//要存入数据库的用户信息文档
var user = {
    name: this.name,
    password: this.password,
    email: this.email,
    head: head
};
```

这里我们在用户文档里添加了 head 键,方便后面使用。

打开 index.js ,将 [app.post('/post')] 中的

```
post = new Post(currentUser.name, req.body.title, tags, req.body.post);
```

修改成:

```
post = new Post(currentUser.name, currentUser.head, req.body.title, tags, req.body.post);
```

注意: 需要把 email 转化成小写再编码。

修改 post.js , 将

```
function Post(name, title, tags, post) {
  this.name = name;
  this.title = title;
  this.tags = tags;
  this.post = post;
}
```

修改为:

```
function Post(name, head, title, tags, post) {
```

4

Ш

Ŷ

```
this.name = name;
this.head = head;
this.title = title;
this.tags = tags;
this.post = post;
}
```

将

```
var post = {
  name: this.name,
  time: time,
  title:this.title,
  tags: this.tags,
  post: this.post,
  comments: [],
  pv: 0
};
```

修改为:

```
var post = {
   name: this.name,
   head: this.head,
   time: time,
   title:this.title,
   tags: this.tags,
   post: this.post,
   comments: [],
   pv: 0
};
```

最后,修改 index.ejs 和 user.ejs,在 </h2> 后添加一行代码:

```
<a href="/u/<%= post.name %>"><img src="<%= post.head %>" class="r_head" /></a>
```

至此,我们实现了给已注册的用户添加头像。

添加未注册用户的头像

修改 [app.post('/u/:name/:day/:title')], 将:

```
var comment = {
   name: req.body.name,
   email: req.body.email,
   website: req.body.website,
   time: time,
   content: req.body.content
};
```

修改为:

```
var md5 = crypto.createHash('md5'),
    email_MD5 = md5.update(req.body.email.toLowerCase()).digest('hex'),
    head = "http://www.gravatar.com/avatar/" + email_MD5 + "?s=48";
var comment = {
    name: req.body.name,
    head: head,
    email: req.body.email,
    website: req.body.website,
    time: time,
    content: req.body.content
};
```

打开 comment.ejs ,将

```
<% post.comments.forEach(function (comment, index) { %>
    <a href="<%= comment.website %>"><%= comment.name %></a>
    <span class="info"> 回复于 <%= comment.time %></span>
    <<p>comment.content %>
```

```
<% }) %>
```

修改为:

最后,在 style.css 中添加两行样式:

```
.l_head{float:left;margin-left:-4em;box-shadow:0px 1px 4px #888;}
.r_head{float:right;margin-top:-2.5em;box-shadow:0px 1px 4px #888;}
```

现在, 我们给博客添加了头像显示的功能。
